

### Concept

The CLEANchick™ Dual Technology candling principle is based on non-contact detection of live embryos with unmatched accuracy. This in combination with the traditional candling unit, which allows removal of clear eggs.

The total results in three categories being live embryos, clear eggs and exploders plus dead large in shell. It can be used for chicken eggs starting from day 16.

### Bio security

The non-contact concept assures virtually 100% cross contamination free production. For easy of cleaning the embryo detection unit can be opened as a door, providing easy access to the candling area. The traditional unit is portable.

### Productivity

Providing a capacity depending on the type of setter tray, makes CLEANchick™ Dual Technology already hard to beat.

This in combination with the unmatched accuracy puts CLEANchick™ Dual Technology in an unrivalled position.

### Energy consumption

Advanced electronics reduce the energy consumption to a few Watts.

### Options

- LAN connection for your network

### Complementary equipment

- Exploder removal system
- Automatic Backfilling unit

### Innovatec Total Concept

All Innovatec's equipment is designed according to the unique Innovatec Total Concept, a proven concept giving the highest return on investment.
