

ULTRAFOGGER

THE DRIEST FOG FOR THE BEST RESULTS

The ultrafogger is specially developed for fogging disinfectants into hatching egg storage. The guaranteed average droplet size smaller than 10 micron keeps the eggs completely dry, not damaging the embryo. With a Hydrogen peroxide the Ultrafogger is suited for every day use and does not harm eggs being disinfected in the first five days.

Developed for disinfection of hatching eggs

- Complete integrated fogging system for volumes up to 200 m³
- Only 220V needed. No noisy compressor
- Easy to use without any clogged nozzles
- Droplet size <10 micron guaranteed. Certificate available
- Dry fog keeps the eggs dry for the best results
- System can be completely automated
- Also available with exhaust system, warning lights and signals, fans, locks, fluid sensors
- Proven results in hatcheries, food processing
